Senior Software Engineer

PROFILE

With over **5+ years** of experience as a Senior Software Engineer, I bring strong expertise in analysis, **programming, and debugging**. I excel in strategic planning, project and **code reviews**, responsive design, and building **scalable technical infrastructures**. Proficient in JavaScript technologies, I handle design, development, testing, and post-release support with precision. I demonstrate proven leadership and mentoring skills, and work effectively both independently and in team environments. I quickly adapt to new concepts and recently earned the **AWS Certified Cloud Practitioner certification**.

SKILLS

FE Technologies:

- React JS, Next JS, Redux, Redux Toolkit, Thunk, Saga
- Angular, Angular Universal, NgRx, RxJS (Angular Version 8 to 18), Angular Server Side Rendering (Hydration), Angular SignalsJest and React testing library
- Next JS Server Side Rendering, SEO Optimization, Smooth UI Development
- Vue.js, Pinia, and PrimeVue
- Tailwind, Bootstrap, SCSS, Material UI, Custom CSS, Mixins, Ant Design, etc
- Experience in React Project Version Upgrade
- Component Optimization & Code Optimization
- HTML, CSS, jQuery, Svelt, Test Case (Jest, Cypress, react-testing-library, Mocha & Playwright)

BE Technologies:

- **Node.js, Express.js**, AWS Lambda, AWS Step Functions, and other AWS services
- AWS chime, AWS Cognito, Amazon EC2, Amazon S3, Amazon SQS, and Amazon SNS
- **PostgreSQL**, SQL, MongoDB, Microservices, **OAuth**, **JWT**

Version Control System:

- Git, GitHub, GitLab, BitBucket, CI/CD - **Expert**

Project Management tools:

- Confluence, Jira, Slack, Teams, Jenkins, Trello, and Postman

Other tools:

- Docker, and MODO App Center
-

PROFESSIONAL EXPERIENCE

AjeevanTech (Consultancy company)

Senior Software Developer/Engineer

- Attend daily scrum meetings, provide updates on tasks from JIRA tickets, and participate in end-of-day review meetings to discuss progress and challenges.
- Mentor junior developers on best practices, and maintain systems by monitoring and fixing software defects

Techmonks Pvt. Ltd

Senior Software Developer/Engineer (Frontend)

- Daily responsibilities as a developer include attending a scrum meeting at the start of the day with previous day updates and challenges that we faced.
- A JIRA ticket is issued for every employee which specifies the task at hand. Work on the respective ticket assigned, give timely updates to the manager and then attend a review meeting at the end of the day and discuss the work done.
- Trained and mentored junior developers in programming methodologies and best practices.
- Maintaining systems by monitoring and correcting software defects.

PROJECTS

Wiley Author Services, HM (Russia) (Team size - 10)

Role: Frontend Lead Developer

Technologies: React.js, TypeScript, Redux, Redux Toolkit, Material UI (MUI), React Storybook, Jest, Node.js, Express.js, MongoDB, AWS Lambda

Project Description: A platform developed for Wiley to support authors throughout the publishing journey. It assists with manuscript submissions, editing and proofreading services, language support, and promotion of journals and books. The platform is designed specifically for author services and does not function as a digital library.

Roles & Responsibilities: Led the frontend development team and was responsible for breaking down user stories into development tasks and assigning them to the team. Designed and implemented frontend architecture to support evolving product requirements. Guided junior developers in debugging, implementing best practices, and delivering high-quality code. Coordinated closely with the backend team to integrate REST APIs and ensured a consistent user experience. Participated in code reviews, sprint planning, and Storybook documentation to maintain scalable and reusable UI components.

CXone Agent – NICE (USA) (Team size – 10)

Role: Full Stack Developer (Frontend-Focused)

Technologies: React.js, **Angular**, TypeScript, Redux, Redux Toolkit, Material UI (MUI), React Storybook, Jest, Node.js, Express.js, Jenkins, AWS SNS, AWS SQS

Project Description: NICE inContact CXone is a cloud-based contact center platform designed to enhance lead quality and reduce the cost of client interactions. It supports omnichannel communication—including voice, email, chat, and social media—and includes workforce optimization features such as e-learning, performance management, and automated scheduling. The agent-side application is tailored for efficient communication and daily task management.

Roles & Responsibilities: Worked on both frontend and backend modules. On the frontend, developed and maintained complex UI components for Phone Control, Agent and Skill Directory, App Drawer, and the Commitment Module using React and MUI. On the backend, developed RESTful APIs using Node.js and Express.js to support these features. Implemented pagination and search functionalities in Agent and Skill Directories. Designed and built a calendar module for event visualization. Oversaw and mentored 2 junior developers. Architected scalable frontend and backend solutions and coordinated API integration with AWS-based messaging services (SNS, SQS). Collaborated in CI/CD processes using Jenkins.

Leap – Aditya Birla (INDIA) (Team size – 12)

Role: Frontend Developer & Frontend Architect

Technologies: Next.js, TypeScript, Redux, Redux Toolkit, Node.js, Express.js, MongoDB, AWS Lambda, AWS Step Functions, AWS S3, Jenkins, Jest

Project Description: Leap is a banking application developed to streamline the distribution of financial policies and simplify payment processing for banks like HDFC, AXIS, and IDFC. The platform provides a user-friendly interface for customers to browse, purchase, and manage various policy-related products and services without needing to log into their core bank accounts.

Roles & Responsibilities: Led the design and integration of new HDFC Bank flows into the Leap platform. Implemented the HDFC OTP-PREFILL flow, allowing users to complete policy purchases without logging into their HDFC accounts. Maintained and optimized existing flows for AXIS and IDFC banks. Developed reusable UI components using Next.js and Redux Toolkit. Resolved critical production bugs, incorporated customer feedback, and contributed to improving the overall user experience. Collaborated with the backend team to integrate APIs built with Node.js and AWS services like Step Functions and Lambda. Participated in CI/CD setup using Jenkins and ensured test coverage using Jest.

SLPNAV – Sleep Navigator (USA) (Team size – 8)

Role: Full Stack Developer (Frontend-Focused)

Technologies: React.js, TypeScript, Redux, Material UI (MUI), Node.js, Express.js, PostgreSQL

Project Description: SLPNAV is a health-tech application designed to monitor and analyze sleep patterns of patients, supporting both home and hospital-based diagnostics. It assists physicians in evaluating sleep disorders, tracking patient progress, and managing patient profiles, enabling more accurate diagnoses and personalized treatment plans.

Roles & Responsibilities: Developed and maintained RESTful APIs using Node.js and Express.js. On the frontend, implemented responsive UI components for physician and patient portals using React and MUI. Key features included digital signature management, PIN and password updates, and patient profile customization. Managed and guided 2 team members, ensuring adherence to coding standards and delivery timelines. Actively collaborated with cross-functional teams (design, backend, QA) to align development with project goals and ensure timely completion of milestones.

FLORIZEL Powered by Fonemed (Canada) (Team size – 6)

Role: : Senior Frontend Developer

Technologies: Angular, React JS, Node JS, Nest JS, Microservice Architecture, AWS (All Major Services), Serverless Framework, AWS Lambda, Dynamo DB, API-Gateway, AWS-Cognito, AWS CloudFormation.

Project Description: Web-based Admin Panel built for healthcare practitioners and organization admins to manage patients, track health vitals, and conduct remote consultations via Zoom. The platform supports multi-level SaaS architecture, allowing organizations to manage multiple tenants efficiently. Key features include patient onboarding, health readings dashboard (e.g., blood pressure, glucose, temperature, weight, heart rate via BLE-connected devices), appointment scheduling, real-time alerts for abnormal readings, and automated medicine reminders.

Roles & Responsibilities: Designed and implemented responsive and scalable UI components for the Admin Panel using Angular and React. Developed dashboards for health monitoring, appointment scheduling interfaces, patient profile management, and Zoom video call integration. Built interactive charts and tables for real-time display of patient vitals. Focused on building reusable components, ensuring UI consistency, and delivering smooth user experiences. Integrated frontend with backend APIs, handled edge cases, and optimized performance. Worked closely with backend, QA, and product teams to meet feature requirements and ensure timely delivery across the multi-tenant SaaS system.

CERTIFICATION

AWS Certified Cloud Practitioner

VALIDATION NUMBER: 0ab34df5475e42cfa52bf321392e502a

VALIDATE AT: <https://aws.amazon.com/verification>

Issue Date: June 26, 2025

Expiration Date: June 26, 2028
